- 0 is Sunday, 6 is Saturday.
- Week that overlaps two years belongs to year that contains most days of that week. Hence week number for 1st January of a given year can be 53 if week belongs to previous year.
`date("W", mktime(0, 0, 0, 12, 8, $year))` always gives correct number of weeks in `$year`.
- The Epoch is the 1st January 1970.
- With leading zeroes
